

**WE'RE HIRING!**

# MEAN-STACK DEVELOPER

**LOCATION:** South Delhi, India

**EXPERIENCE:** Min. 2 Years

## **KEY RESPONSIBILITIES-**

- Drive the technical architecture/design alignment with automation/orchestration of a fintech product.
- Innovate on new capabilities and core assets/IP working while collaborating with the Product team and Operations team.
- Be responsible for the development and deployment of required digital solutions pertaining to client requirements.

## **OUTLINE OF THE IDEAL CANDIDATE-**

- Proficient understanding of HTML5, CSS3, JavaScript, DOM, etc.
- Experience in any one or more of Angular or React, be able to create interfaces fast according to requirements.
- Knowledge of libraries like Redux or architectural styles like MVC, MVVM a definite plus but not essential.
- Good understanding of Back end development, Node.js, Express, MongoDB/DynamoDb preferred. If this is not your tech stack but you have a good understanding of data structures, algorithms, working with and creating APIs, databases, authentication and more then that's also good.
- Knowledge of Cloud Providers like AWS, Azure, GCP also a definite plus but not essential.
- Basic understanding of automation testing tools and scripting.
- Most importantly, the passion to work in a startup. It only gets better if the person can sync with the team, take on their responsibilities and give the best output. It's a small team with a flat hierarchy, everyone grows with the company.
